AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0007] on pages 2 and 3 with the following amended paragraph:

[0007] According to the above features, from a broad aspect, the present invention provides a metal wire rod shopping cart having an article carrying basket ~~supported on~~ secured to a frame provided with casters ~~by a user person~~. The basket has a bottom wall, opposed side walls, a front wall and a backrest wall of a baby seat compartment. The improvement resides in that at least one reinforced display frame is integrated in a wall of at least one of the front wall and opposed side walls. The reinforced display frame has a U-shaped metal channel defined by opposed parallel side channel members and an integral transverse end channel member disposed in a common plane. The channel members have longitudinal slots ~~having a set opening facing inwardly to one another~~. A metal panel sheet is secured substantially centrally in said slots of at least said opposed parallel side channel members to divide the slots to form an outer and inner slot adjacent an outer and inner side wall of the metal panel sheet whereby to receive a promotional sheet having display material thereon in sliding fit over the outer and inner side walls between opposed parallel ones of the outer and inner slots. The channel member of the reinforced display frame is welded to metal wire rods in the said wall ~~about the channel members~~ whereby the reinforced display frame lies in the plane of the side wall to provide for non-obstruction when nesting said shopping cart with other like shopping carts and to reinforce the side wall while providing a backing surface behind the promotional ~~sheet or~~ sheets.

Please replace paragraph [00031] on page 8 with the following amended paragraph:

[00031] Referring now to Figures 8 to 12, there will be described a preferred embodiment of the present invention and wherein the display frame is a reinforced display frame 50 having a generally U-shaped construction and defined by opposed parallel side channels 51 and 51' and an integral transverse end channel 52. The channels are disposed in a common plane whereby to form a narrow U-shaped metal frame. With further

Commissioner for Patents

reference to Figure 10, it can be seen that the side channel members 51 and 51' are of U-shaped cross-section ~~also~~ and define longitudinal parallel slots 53 ~~with the slot openings facing inwardly to one another~~. A metal panel sheet 54 is secured substantially centrally in the slots, as shown in Figure 10, by spot welds 55 or a longitudinal weld with the top wall 56 of the channel members.

Please replace paragraph [00034] on page 9 with the following amended paragraph:

[00034] It is pointed out that the reinforced display frame 50 is a narrow reinforced steel frame and which has a width ~~which can integrate same~~ no greater than the width of the wire rods 69, as shown in Figure 11, whereby it is integrated within the thickness of the wire rod construction of the shopping cart walls to which it is secured ~~whereby the~~. The frame lies in is located within the plane of the walls of the shopping cart to provide for re-inforcement of the walls ~~while at the same time providing a backing surface behind the promotional sheets~~. As hereinshown the wire rods of the sidewall are welded to the frame. Also, the reinforced display frame ~~lying within the plane of the side walls permits~~ allows for the shopping cart to be nested with other shopping carts without obstruction or damaging of the outer promotional sheet.
